

Additional Information Requested From the Council

As part of the representations some objectors sought additional information from PBA regarding technical assumptions / data. PBA provided data, as requested, to inform the informal meetings and allow all parties to seek common technical ground. The data concerns PBA and Experian modelling assumptions.

The sheets include:

The full economic activity rate tables used by PBA

The detailed age/sex breakdown for the 01-07 Trend Projection

The full net migration profiles

Note - Also compares the 01-07 & 07 - 12 profile

Comparison of economically active persons per household using the 01-07 trend compared to the 07-12 trend projection.

Note - 01-07 is used by PBA in the recommended scenario. 07-12 is reflective of the 2012 SNPP which (we think) is used by represents.

Experian Summary (Old baseline)

Experian Sectors (Old baseline)

Note - Experian are updating their baseline and scenario to their most recent model run. This should be available in a couple of weeks.

Experian Change (Old baseline)

Note - Shows how Experian secure their future workforce

Experian Autumn 2014 (Inc. PBA 01-07 population scenario)

Note - Shows how Experian secure their future workforce in both the new baseline and scenario.

In addition to the above, and following the techncal meetings PBA offered to prepare data tables of the 2011 commuting data.

This is publically available data so was not circualted in advance. It included here to help the EiP if commuting is raised in the disucssions.

Three sheets are included:

Net communiting balance (2011)

Gross Commuting flows (2011)

Job density statisitcs (2000 - 2012)

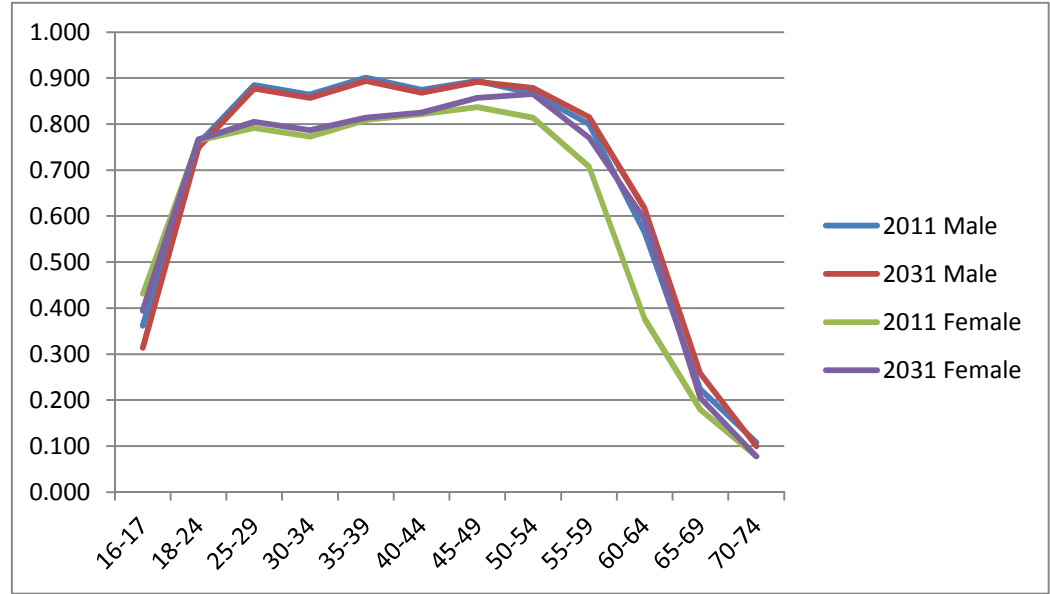

A time series produced by the ONS to monitor commuting changes over time.

At the informal meetings Turley suggested the PBA EA rates differed from theirs.

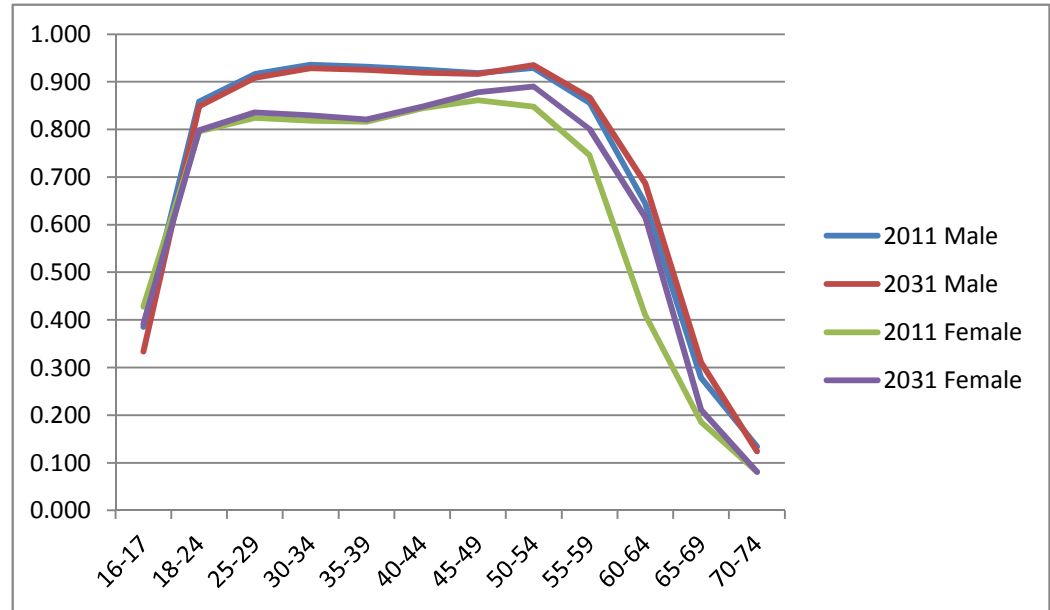

PBA sought additional clarification; which was supplied by Turley.

We include it here, along with a simple comparion for here for completeness.

Note: This sheet includes additional data supplied to PBA as part of our work to understand commuting and labour market issues. So some data is drawn from the Labour Force Survey and is not compatible with the normal 'headline' job numbers published by Experian. When comparing any data in this sheet with Oxford or Cambridge Economics job numbers Experian advice 'Workforce Jobs' should be used. The 'headline' job number for the HMA is therefore 13,070 (baseline) and 13,640 (scenario)

Job Density - Time Series

The ONS publish 'Job Density Data' to show how commuting patterns change over time.

A ratio of 1 suggests one job for each person of working age. The national average, and that of the SW is 0.8 (i.e. 0.8 jobs for each person aged 16 - pension age).
